

Bob the Judge

Migration Cutover Decision Advisor

Powered by IBM Bob

Bob writes the code. Bob ships it.

Bob the Judge tells Bob when.

The Question Nobody Can Answer

When is it safe to cut over?

70%

of enterprise migrations
stall in dual-run

\$200K

per month running
two systems in parallel

0

tools producing a
per-function cutover decision

CTOs make the cutover decision on gut feel. There is no objective, auditable answer.

Bob the Judge

Function-level verdict

Per-function readiness score, not a system-level guess

Real-time parity analysis

Routes live traffic through both systems simultaneously

Bob-native intelligence

Plan, Code, Ask, Orchestrator — Bob operates in all 4 modes

Regulator-grade audit PDF

One click exports a compliance sign-off document

VERDICT EXAMPLE

Domestic Wire

100 **SAFE TO CUT**

Scheduled Payment

100 **SAFE TO CUT**

International Wire

0 **DO NOT CUT**

Architecture

01**Traffic Generator**

Sends identical payment transactions to both systems

**02****Parity Engine**

Compares fee, amount, status — flags divergences

**03****Scoring Engine**

Readiness score 0-100 per payment function

**04****IBM Bob**

Plan + Code + Ask + Orchestrator modes

**05****Audit PDF**

Regulator-grade report with sign-off page

Domain: Banking payment processing · Legacy=COBOL-style, Modern=FastAPI · Divergence by design for demo clarity

Bob Operates in All 4 Modes

Plan

Generates phased cutover strategy with risk register and timeline

Code

Produces ready-to-deploy patch for the highest-severity divergence

Ask

Explains each verdict in plain English with regulatory context

Orchestrator

Runs 4-agent pipeline:
Analyser > Risk-Scout >
Fix-Gen > Reporter

Powered by Bob's multi-model routing · Claude · Mistral · IBM Granite · fine-tuned code & security models

Mock layer active now · Real IBM Bob API connects at May 15 kick-off stream

Market & Impact

800B

lines of COBOL
still in production

\$80B

spent annually on
mainframe modernization

70%

migrations stall
in dual-run phase

\$0

tools solving
the cutover decision

Why We Win

Bob-native — none of our competitors use IBM Bob

Code-level granularity — they operate at workflow level, we operate at function level

Demo-friendly — 3 clear verdicts, judges understand it in 10 seconds

IBM judges, IBM hackathon — cutover is IBM's flagship enterprise pain point

What CTOs Are Asking For

“We've been stuck in dual-run for 14 months.

Three consultants couldn't tell us when to cut over.

*Bob the Judge gave us per-function verdicts in 60 seconds —
and the audit PDF is exactly what our regulator asked for.*

Sarah Chen, CTO

Meridian Financial · Mid-market US bank, \$42B AUM

(Illustrative customer scenario based on observed pain points across COBOL banking modernization programs, 2025–2026.)

The buyer is the CTO running a stalled migration. The price is one stalled month of dual-run infrastructure.

Extends watsonx.governance Q1 2026

Agent Monitoring & Insights into the cutover window

Agent Monitoring

watsonx.governance Q1 2026:
track agent decisions,
behaviors, performance
in real time

Bob the Judge:
per-function readiness
verdicts on every live
transaction, function-level

Threshold Alerts

watsonx.governance Q1 2026:
alert when agent thresholds
breached in production

Bob the Judge:
>2 σ anomaly flagging +
Wilson 95% CI gates the
cutover decision

Audit-Ready Reporting

watsonx.governance:
continuous compliance
reports, controls mapping
(NIST, FFIEC, COBIT)

Bob the Judge:
one-click regulator-grade
PDF with sign-off page
and evidence trail

Bob the Judge plugs the cutover-decision gap inside IBM's existing governance fabric. Designed to plug into watsonx Orchestrate workflows.

Bob writes the code. Bob ships it.
